

Theme color configurator

v2.0.2

Installation, configuration and usage

Installation

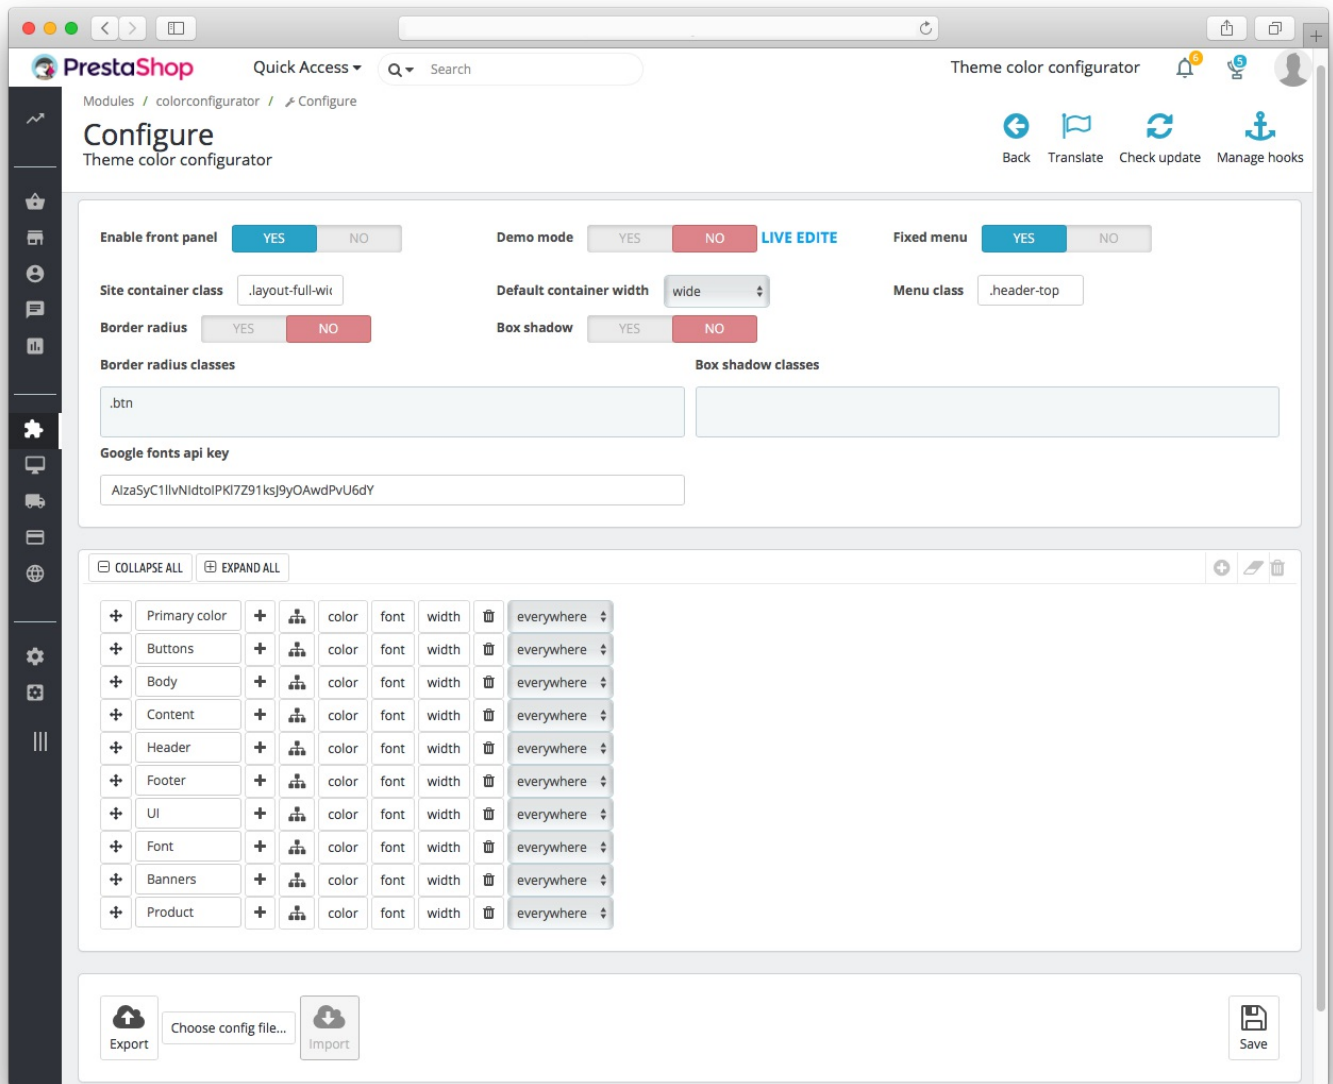

Theme color configuration is installed like any other module. Simply upload your archive to install it.

After installation, the module is ready for use.

Configuration

Configuration in Back Office

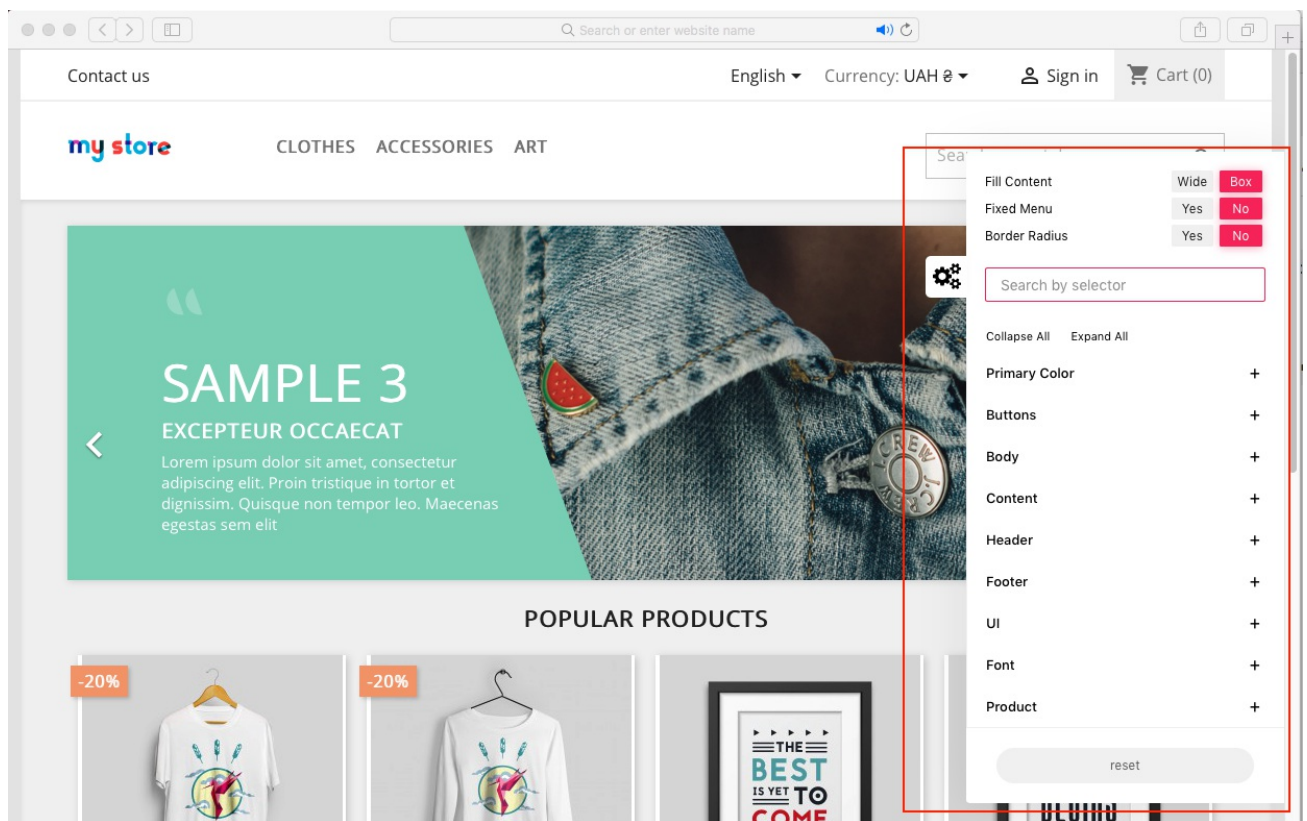

The module setup page has three tabs:

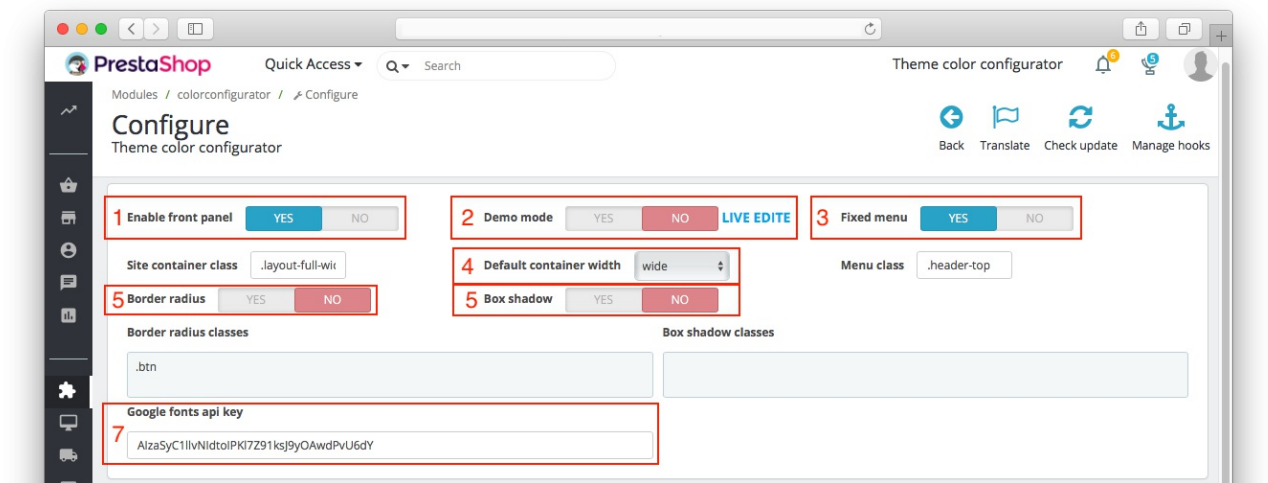

Top tab settings

The following settings are available here:

- Enabling the site's configuration panel at the front office (1):

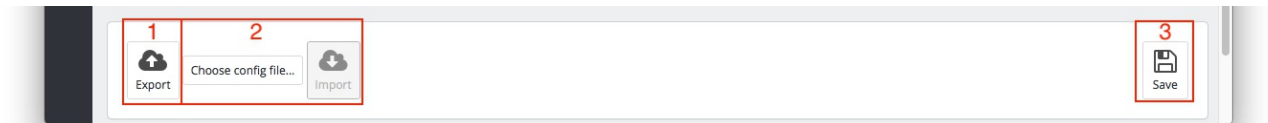

- Enabling the demo mode for the store and “Live Edit” when you click on which you will go to the front office to configure the store(2);
- The default setting for fixing the store top menu (3);
- The default setting for “Default container width”(4) - wide or box;
- Default setting for enabling or disabling “Border radius”(5) and “Box shadow”(6);
- Also, to use the fonts from Google, you must specify an API key in the field “Google fonts API key”(7). How to get an API key can be read from the following link:
https://developers.google.com/fonts/docs/developer_api
- In the remaining fields, you must specify the correct CSS classes of your site for the correct operation of the module.

Lower settings tab

Here the following functional is available:

- Export all current module settings (1);
- Importing new module settings (2);
- Saving all current settings to the model (3).

Central settings tab

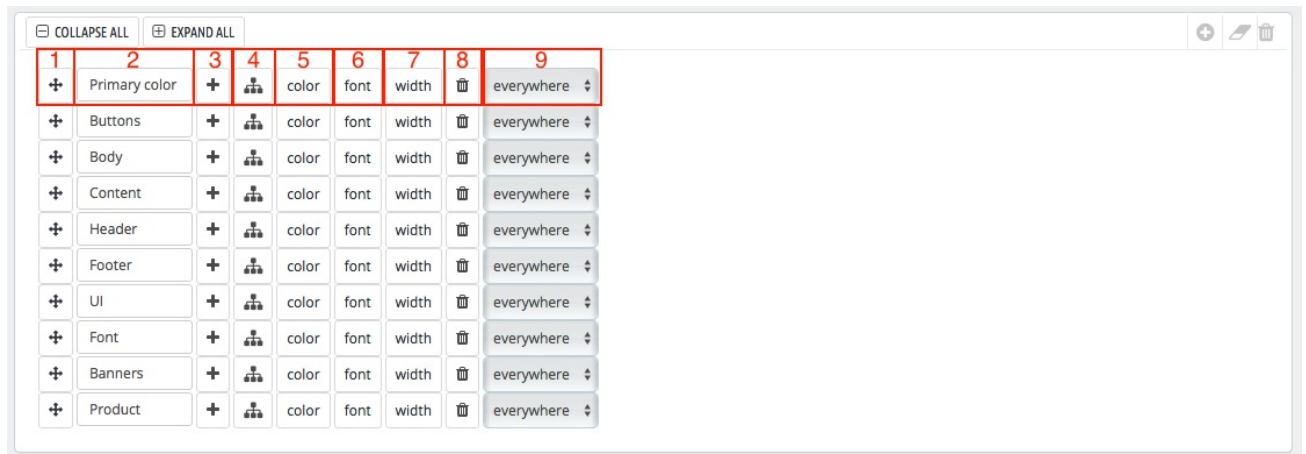

Here are settings for customizing the store. Here you can customize the colors, font widths of the store containers.

Settings can be split into groups. Each group can have its own subgroups or settings for styles. Nesting in a group can be any, without restrictions.

The groups have the following functional:

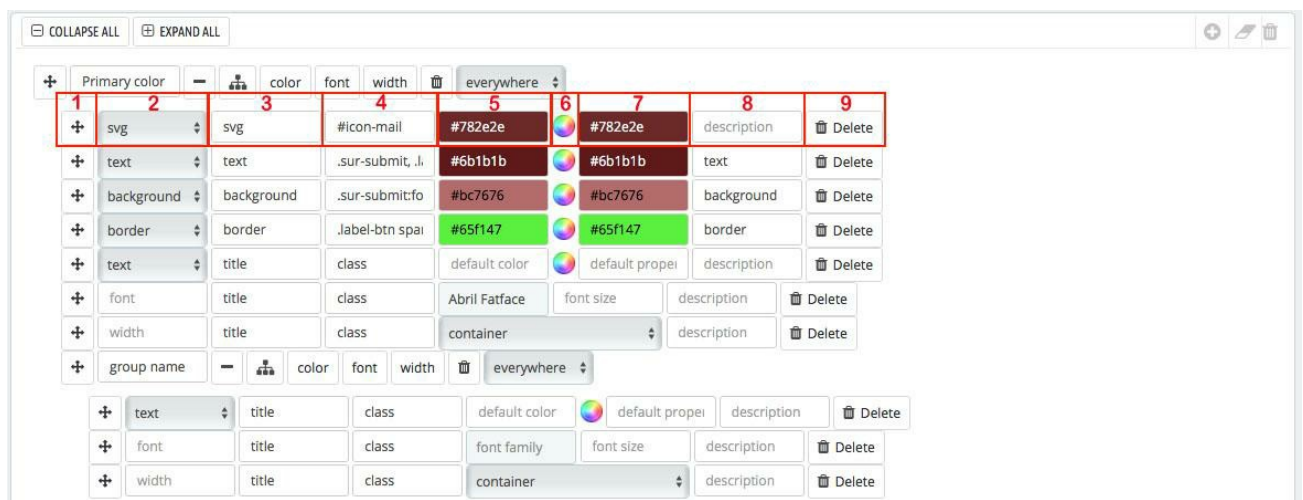

- Moving a group (1);
- Group name (2);
- Deploying / Grouping Groups (3);

- Adding a Subgroup (4);
- Adding a group of color settings (5);
- Adding a group of font settings (6);
- Adding a group of container width settings (7);
- Deleting a group (8);
- Select a page on which to apply the settings of this group (9);

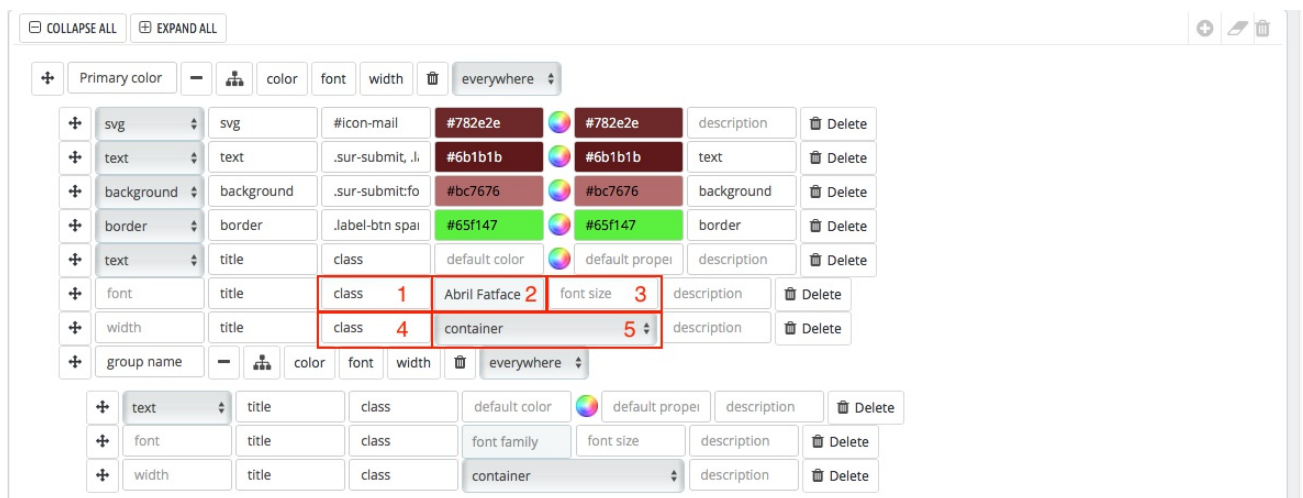

Customizing colors:

- Moving a group (1);
- The element for which the color will be applied (2);
- Setting name (3);
- Classes of CSS to which the color will be applied (4);
- Default Color (5);
- Color picker (6);
- Default Properties (7);
- Description current color settings (8);
- Deleting settings (9);

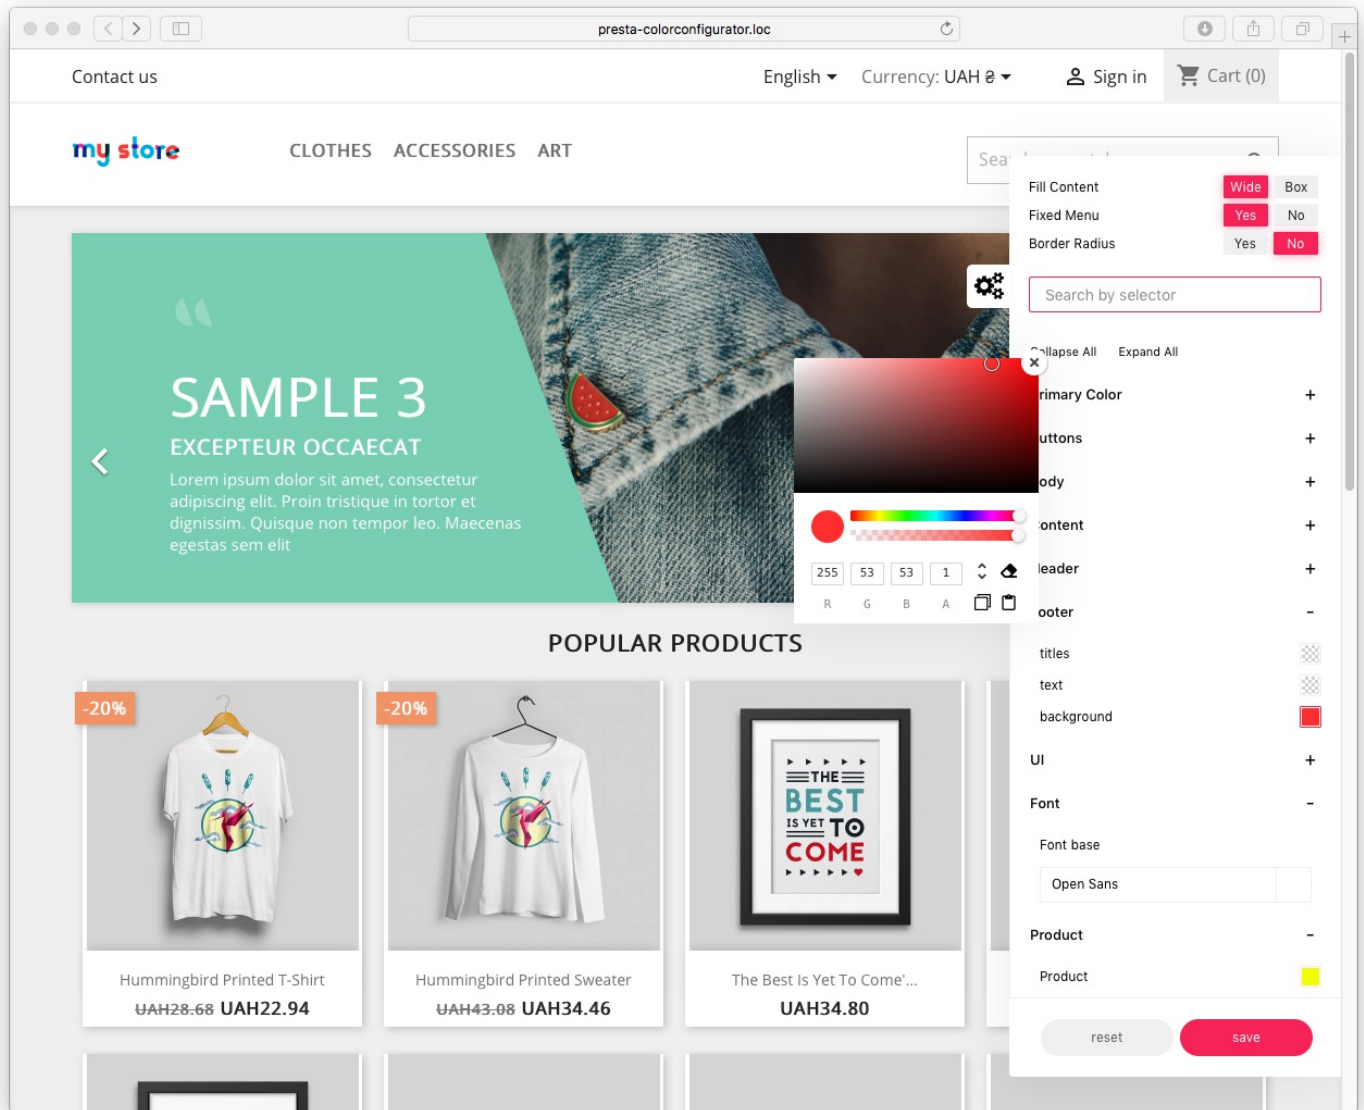

Store color and width settings

- Classes CSS to which styles will be applied (1, 4);
- List of fonts available for selection with Google Fonts (2);
- Font size (3);
- Container type (5).

Configuration in Front Office

On the front panel you can also customize the colors of your store. In the front office are available such settings as in the back office. Here, when you change the settings of the module, you can see that the result of the settings you made is saved and saved or reset.
